GROWTH 2022 – 2024

968 → 3,523 postings

## 01 - MARKET GROWTH

### Year-over-Year Hiring Explosion

AI JOB POSTINGS BY YEAR

+264%

Growth from 2022 to 2024 peak  
From 968 → 3,523 postings in just 2 years

AI hiring was essentially flat pre-2022, then accelerated sharply following the public release of large language models in late 2022. The 2025 plateau at 3,432 postings suggests the market is stabilizing at a structurally higher baseline rather than continuing to spike exponentially.

## 02 - ROLE DEMAND

## 04 - SKILLS INTELLIGENCE

### Most In-Demand Technical Skills (55,119 Mentions)

Java • 1,683

scikit-learn • 1,670

SQL • 1,662

Airflow • 1,662

Transformers • 1,657

Machine Learning • 1,653

GCP • 1,650

Azure • 1,644

A/B Testing • 1,644

Kubernetes • 1,643

NLP • 1,637

AWS • 1,637

R • 1,637

Linux • 1,632

PyTorch • 1,622

LLM • 1,625

Deep Learning • 1,606

Git • 1,632

Hadoop • 1,604

Data Engineering • 1,653

**Key observation:** Skills are remarkably evenly distributed (~1,600–1,683 mentions each), suggesting that top companies expect candidates to be *broad-spectrum* rather than hyper-specialized. Cloud fluency (AWS, Azure, GCP) and infrastructure tooling (Kubernetes, Airflow, Docker) appear alongside deep ML frameworks (PyTorch, scikit-learn, Transformers), confirming that the ideal AI engineer in this market is both a researcher and an engineer.

## 05 - HIRING LANDSCAPE

### Top Companies & Global Hotspots

TOP 10 HIRING COMPANIES

TOP 10 HIRING LOCATIONS

India (Bengaluru + Hyderabad + Pune) represents ~17% of all postings, underscoring its emergence as a global AI talent hub alongside US tech centres.

## 06 - PROJECT STACK

### Tools & Technologies Used in This Project

Python 3.12

Data cleaning • pandas

MySQL / PostgreSQL

SQL aggregations

Power BI

5-page dashboard

Power BI Service

Cloud publishing

GitHub

Version control • docs

## 07 - KEY FINDINGS

### Strategic Insights & Implications

| Metric                | Finding                                                                                                 | Implication                                                                 |
|-----------------------|---------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| Top Skill             | Java, SQL, scikit-learn each appear in 1,650+ postings — nearly uniform demand across all listed skills | Master fundamentals first; specialization pays but breadth wins interviews  |
| Highest-Paying Role   | AI Architect averages \$150K — \$26K above the market mean                                              | Architecture & system design skills command a clear premium                 |
| Fastest Growing Title | LLM Engineer was near-zero before 2023; now ranks #4 with 1,210 postings                                | Prompt engineering and fine-tuning are now permanent career paths           |
| Best-Paying Location  | Sydney (\$144.9K) narrowly edges Toronto (\$144.3K) — both above SF (\$141K)                            | Talent scarcity in non-US markets is driving up comp to compete globally    |
| Remote Premium        | 40% of jobs are remote, compensated on par with onsite roles                                            | Remote is now mainstream — no longer a salary discount in AI                |
| Experience Gap        | Lead earns \$167K vs Entry at \$79K — a 111% gap across just 4 levels                                   | Early investment in seniority progression yields outsized financial returns |
| Market Growth         | 3,523 postings in 2024 vs 968 in 2022 — a 264% increase in 24 months                                    | Post-ChatGPT AI hiring is structural, not cyclical                          |
| India's AI Rise       | Bengaluru, Hyderabad, and Pune collectively account for ~17% of postings                                | Indian tech hubs are becoming globally competitive AI talent centres        |
